

RoyalBlue sandbox walkthrough

Product observations · hosted prototype · not a finished build

Walk the customer and staff flows and send notes back. We'll use those observations as the next build list.

Landing page: <https://royalblue-web.vercel.app/welcome> (also where <https://royalblue-web.vercel.app/> opens)

Login: <https://royalblue-web.vercel.app/login>

First load can take ~30–60s if the API was asleep.

Login with **email or Nigerian phone** + password. Use a **private window** (or logout) when you switch roles.

Staff

Land on the credit desk (/admin), not Home. No transaction PIN.

Role	Email	Phone	Password	What to look at
Administrator	admin@royalblue.ng	08011111111	RoyalBlueAdmin1!	Pipeline, freeze, team, recommend and decide
Loan officer	officer@royalblue.ng	08022222222	RoyalBlueOfficer1!	Claim / recommend only — no freeze, no final decision
Credit manager	manager@royalblue.ng	08033333333	RoyalBlueManager1!	Review, decide, freeze

Customers

Land on Home. PIN is 123456 for send / bills.

Profile	Email	Phone	Password	Account
Funded, Tier 2	customer@royalblue.ng	08044444444	RoyalBlueCustomer1!	NUBAN 8044444444 , ₦185k, BVN + NIN + ID. Proof of address → Tier 3 (/verification)
Starter ₦50k	starter@royalblue.ng	08055555555	RoyalBlueStarter1!	NUBAN 8055555555 , ₦32.5k, no BVN/docs

New signup

Use a **new** email, not the ones above:

<https://royalblue-web.vercel.app/sign-up>

Email → password → personal/business → **BVN or NIN** (keep the number even if the check is slow; skip only if you want starter ₦50k) → confirm → 6-digit PIN.

Email OTP and authenticator are **off** in this sandbox.

Worth walking

1. Landing / login / signup as a new person
2. Starter vs funded customer: Home, limits, KYC, send, bills, cards, Me
3. Same loan file as officer vs manager vs admin — who can claim, recommend, freeze, decide

Please ignore for now: cold starts, empty bank/bill lists on a slow API, missing email codes, anything that looks like FX.

Send: what felt unclear, what you'd expect next, and anything that looks wrong for a Nigerian MFB. Screenshots + "I was this user" is enough.
