RoyalBlue sandbox walkthrough

Hosted prototype · 19 October 2026 · staff logins only

Walk a **new customer signup** and the **staff credit desk**, then send notes. There are no saved retail demo customers anymore — open an account the same way a real person would.

Landing: https://royalblue-web.vercel.app/welcome
Login: https://royalblue-web.vercel.app/login
Sign up: https://royalblue-web.vercel.app/sign-up

First load can take ~30–60s if the API was asleep. Login with **email or Nigerian phone** + password. Use a **private window** (or logout) when you switch roles.

Staff (saved in this environment)

These three still exist. They land on the credit desk (/admin), not Home. They have no customer NUBAN and no transaction PIN until they set one under Settings.

Role	Email	Phone	Password	What to look at
Administrator	admin@royalblue.ng	08011111111	RoyalBlueAdmin1!	Pipeline, freeze, team, recommend and decide
Loan officer	officer@royalblue.ng	08022222222	RoyalBlueOfficer1!	Claim / recommend only — no freeze, no final decision
Credit manager	manager@royalblue.ng	08033333333	RoyalBlueManager1!	Review, decide, freeze

How onboarding works

Use a **new email that can receive mail**. Do not reuse the old customer@ / starter@ accounts; they are gone. If the email is already registered, login opens instead of Home.

1. **Email.** We send a 6-digit code.
2. **Verify email.** Enter that code (not the PIN you set later).
3. **Password.**
4. **Authenticator** only if the API asks for it. You can usually skip this for now.
5. **Personal or business.** Business is a wallet (money in / send), not POS or cashiers.
6. **Name and phone.**
7. **BVN and/or NIN.** Both fields are on the same screen. Prefer both; at least one is required. There is no skip and no phone-only “starter” account.
8. **Confirm identity (“Is this you?”).** Shows the name, date of birth, and the residential address on the BVN/NIN record.
9. **Live selfie.** Optional now — same step later under Account limits. Allow camera; the light should go off after you take the photo, continue, or skip.
10. **Residential address.** Prefills from the identity record. You can confirm it, upload a utility bill, or skip. Tier 3 only unlocks if the bill address matches NIMC; anything else goes to staff.
11. **Business details** if you chose business.
12. **6-digit transaction PIN** (create, then confirm). This is for sends and bills, not the email code.

After PIN, you land on Home. A dedicated NUBAN (virtual account) is minted when BVN *or* NIN is on file. Inbound transfers credit that VA. Outbound NIP debit the merchant wallet against the customer’s ledger. Intra-RoyalBlue stays on our books.

Tiers and limits

Opening the account puts you on **Tier 1**. Limits depend on whether a confirmed BVN is linked.

Tier	What is on file	Per transfer	Daily	Max balance
Tier 1 · NIN	NIN only (no BVN)	₦30,000	₦30,000	₦300,000
Tier 1 · BVN	BVN (NIN optional)	₦50,000	₦50,000	₦300,000
Tier 2	Tier 1 + live selfie matched to the BVN or NIN photo	₦200,000	₦500,000	₦500,000
Tier 3	Tier 2 + residential address confirmed (bill matches NIMC)	₦5,000,000	No daily cap	No max

Finish selfie and address later from **Account limits** (Me / Settings). Staff see address files that did not auto-match.

Worth walking

1. Sign up with a real BVN, a real NIN, and both — confirm the address on the identity screen, then check Home for a NUBAN.
2. Skip selfie and address, then complete them from Account limits. Try a send (needs the PIN you set).
3. Business signup: wallet dashboard and money in, not a till.
4. Same loan file as officer vs manager vs admin — who can claim, recommend, freeze, decide.

> **Do not use** old saved retail logins (customer@royalblue.ng, starter@royalblue.ng, PIN 123456). They are not in this environment. Open a new account instead.

> **Please ignore for now:** cold starts, empty bank/bill lists on a slow API, anything that looks like FX.

Send: what felt unclear, what you'd expect next, and anything that looks wrong for a Nigerian MFB. Screenshots + "I was this user" is enough.

— Chike
